 AB OBJECTIVE: To investigate the effect of Shenqi Fuzheng injection (SQFZI) on immune function in gastric carcinoma patients in post-operational and chemotherapeutic period. METHODS: One hundred and twenty-three gastric carcinoma post-operational patients and 36 cases of gastric carcinoma patients on chemotherapy, according to their using SQFZI or not, parameters of immune function, including red blood cell C3b receptor rosette (RBC-C3bRR) and immune complex rosette (RBC-ICR), T-lymphocyte subsets and NK cell activity were determined. RESULTS: RBC-C3bRR, CD3, CD4 and NK cell activity were significantly higher, but RBC-ICR was lower in patients of post-operational period treated with SQFZI than those in patients untreated with SQFZI ($P < 0.01$). The same difference also revealed between the patients in chemotherapeutic period treated and untreated with SQFZI ($P < 0.01$). CONCLUSION: The immune function of gastric carcinoma patients in post-operational or chemotherapeutic period could be effectively improved by addition of SQFZI.
